

### ABSTRACT

A soft transparent polyolefin resin sheet according to the present invention is characterized by including the following properties (a) to (c): (a) a modulus of elasticity ranges from 20 MPa to 1,000 MPa; (b) an average length of a foreign substance that has a different refractive index from a non-crystalline resin composition occupying the most volume fraction is less than 10  $\mu\text{m}$ , and the number of foreign substances in any section of the sheet is less than 500 foreign substances/ $\text{mm}^2$ ; and (c) a surface-roughness  $R_a$  of at least one of faces of the sheet is less than 0.2  $\mu\text{m}$ . The soft transparent polyolefin resin sheet may have a multilayered structure, in which at least one of outer faces of the multilayered structures can be made of a hard polypropylene type resin.
